## OBJECTIVE

---

Senior Software Engineer with 7+ years of experience designing scalable distributed systems and multi-tenant SaaS architectures. Expert in Domain-Driven Design and event-driven systems, with proven success reducing system latency by 90% through architectural redesign. Strong ownership mindset with experience leading critical platform initiatives across cross-functional teams.

## WORK EXPERIENCES

---

### CoverGo

June 2024 - Present

Senior Fullstack Engineer

#### Key Responsibilities:

- Designed and developed multi-tenant insurance SaaS platform enabling insurers to configure products using low/no-code approach
- Applied Domain-Driven Design (DDD) and CQRS to model core domains: Product, Proposal, Pricing, Policy
- Built scalable backend services with .NET Core and exposed flexible APIs via GraphQL
- Developed dynamic configuration UI using Vue.js for product setup and workflow management
- Containerized services using Docker and deployed to Kubernetes environments
- Implemented centralized logging and monitoring with Loki
- Designed tenant-isolated data models using MongoDB

**Skills:** .NET Core · Domain-Driven Design (DDD) · CQRS · GraphQL · Vue.js · Kubernetes · Docker · MongoDB · Loki · Node.js

### Nashtech

Jan 2021 - June 2024

Senior Software Engineer

#### Key Responsibilities:

- Designed and led the implementation of a new search system using Elasticsearch, significantly improving search performance over the previous Neo4j-based system.
- Designed and implemented scalable backend solutions using .NET Core.
- Developed real-time data processing systems with Apache Kafka and ksqlDB.
- Reduced search latency by 90% by redesigning system architecture from Neo4j-based graph queries to Elasticsearch distributed indexing.
- Conducted unit testing and collaborated with cross-functional teams.
- Mentored junior engineers.

**Awards:** Nashtech's Developer of the year 2022

**Skills:** Apache Kafka, MSSQL, .NET Core, Angular 2+, ksqlDB, NServiceBus, C#, Spoon, Elasticsearch, Unit Testing, Neo4j, Git, Scrum process, Pentaho kettle

**Key Responsibilities:**

- Provided application support and resolved production issues, achieving a 95% resolution rate within a day.
- Developed solutions to address and fix production issues, reducing incident recurrence by 40%.
- Wrote scripts to analyze and correct data in production environments.
- Integrated Neo4j for enhanced data relationships and queries, resulting in a 50% improvement in query performance and data retrieval times.

**Awards:** Nashtech's top excellent developer 2020

**Skills:** Angular 2+, Neo4j, C#, OWASP, REST APIs, Microservices, Kanban process

## PROJECTS

### CoverHealth – Insurance No-Code / Low-Code Platform

June 2024 - Present

|                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Key Achievements    | <ul style="list-style-type: none"><li>Resolved critical production incidents, minimizing system downtime</li><li>Delivered targeted data hotfixes to correct production data integrity issues</li><li>Investigated and resolved performance bottlenecks and data inconsistency issues across distributed services</li></ul> |
| Technologies        | Angular 2+, Neo4j, C#, REST APIs, Microservices                                                                                                                                                                                                                                                                             |

Duckeebs (Personal Project)

Mar 2024 - Present

|                  |                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description      | A platform for keyboard enthusiasts to browse interest check and group buy posts, with AI-powered visualization of keycap sets on user-uploaded keyboard images.                                                                                                                                                                                                                                                                 |
| Key Achievements | <ul style="list-style-type: none"><li>Built an AI-powered feature to visually overlay keycap sets on user-uploaded keyboard photos using object detection, image segmentation, and classification models</li><li>Developed a community platform for keyboard enthusiasts to browse and track interest check and group buy posts</li><li>Deployed the full stack to production on K3s (Kubernetes), Docker, and AWS EC2</li></ul> |
| Technologies     | Angular, .NET Core, Python, MSSQL, Elasticsearch, TensorFlow, Docker, Kubernetes (K3s), AWS EC2                                                                                                                                                                                                                                                                                                                                  |

EDUCATIONS

VNUHCM - University of Science

Sep 2015 - May 2018

Major: College - Information Technology

GPA: 3.6 / 4.0

Award: Consolation prizes of HCMUS's Olympic Information Technology

CERTIFICATIONS

Software Design and Architecture

Dec 2024

Issued by University of Alberta

Mindful Strategies for Quality Software. Think like an expert architect and create quality software using design patterns and principles.

IBM AI Engineering

Aug 2024

Issued by IBM

This certification demonstrates the ability to design, build, and deploy AI models and solutions using IBM Watson OpenScale and IBM Cloud Pak for Data.

Big-O is a coding platform that helps developers improve their coding skills and prepare for technical interviews
